

Key to Symbols:

The Protect-Air™ products help plant managers to easily and cost efficiently comply with increasingly stringent directives on safe use of pneumatic equipment issued by industrial standards organisations such as the ISO, OSHA, H&S (Health & Safety) and others.

Safety

General safety symbols. Placed on the first page of the pertinent product range, this draws attention to the safety features

Injury Protection

The risk of personal injury is reduced by use of special materials and technical safety features of the products.

Line Burst Protection

Use of line burst protectors prevents the feared "whipping effect" and helps prevent injuries.

Compressed Air

This symbol always appears on the "Laws and Regulations" pages and underscores the meaningfulness and significance of the laws.

Eye Protection

The risk of eye injury is reduced by use of special materials and technical safety features of the products.

Setting Locker

These products prevent intentional and unintentional changes in settings, since they include a setting lock.

The following symbols indicate the safety device or protection product required to conform to regulations.

Every product listed complies with one or more safety requirements, laws or regulations.

The round symbols indicate the primary type of protection offered by the pertinent product.

Maintenance Equipment

Safety couples

Pressure regulators

Safety Valves

Lines

Line burst fuses - Airfus (HoseGuards®)
